# Model D and DT sensors

Micro Motion® Model D sensors set the standard for Coriolis flowmeters nearly a quarter century ago. Today, they continue to provide the same outstanding measurement performance that made them so popular.

Working with any of our Coriolis transmitters, Model D and DT sensors provide flow measurement for liquids, gases and slurries — simply and directly. Multivariable capability provides mass flow, volume flow, density, and temperature measurement — all in real time, without the need for additional equipment.

A wide variety of models includes standard process connections for virtually any fluid process. Select from models with features that include:

## Sizes for every need

Model D sensors are available in sizes ranging from 1/4- to 6-inch (6 to 150 mm).

## High-pressure sensors

Several sensors are available in high-pressure models, for pressure flows up to 5600 psi (386 bar). Two of these, the DH25 and DH38, are designed for measuring compressed natural gas (CNG) for legal trade.

## High-temperature sensors

Three models of DT sensors measure process fluids at high temperatures up to 800°F (426°C), without the need for purge connections.

## High-flow sensor

The D600, our largest sensor, is able to measure flows up to 25,000 lb/min (680,400 kg/h), making it ideal for ship loading and unloading, pipeline transfers, platform production, and LACT applications.

## Housing options

Most Model D sensors are available with optional purge connections, and some feature purge connections and/or rupture disks.

## Wetted-part materials for your fluid

All Model D and DT sensors come standard with 316L stainless steel wetted parts. Most models are also available in nickel alloy, and two models feature stainless steel flow tubes that are lined with a Tefzel® coating.

Micro Motion D and DT meters are now available with MVD™ Technology — a new, innovative, multivariable digital processing capability. A 9-wire connection from the junction box to a Micro Motion Series 1000 or Series 2000 transmitter improves ease of use, reduces downtime, and lowers your flowmetering costs.<sup>(1)</sup> Meters with MVD Technology provide cleaner, noise-free digital signals. Digital signal processing means faster response times, enhanced diagnostic capabilities, higher accuracy, and better repeatability.

## System Integration

Micro Motion offers a variety of microprocessor-based transmitters. Depending on the transmitter model, features include milliampere and frequency/pulse outputs, transmitter and process control functions in a single device, and API outputs for crude oil and other hydrocarbon fluids.

Other options include transmitters that can be installed in instrument racks or panels, or housed in NEMA-compliant or explosion-proof enclosures. Sensors and explosion-proof transmitters can be installed in the same hazardous area.

Micro Motion is known worldwide for increasing plant efficiency, production, and profitability. More than 300,000 Micro Motion meters are installed and working in processes just like yours. Contact us, and learn more about Model D and DT sensors.

<sup>(1)</sup> Model D600 offers 4-wire connection to a Series 1000 or Series 2000 transmitter.

# Model D and DT features comparison

	Typical line size	Standard model	High-pressure model	High-temperature model	Purge fittings available	Rupture disk available
D150 Tefzel	1 to 1-1/2 inch (25 to 38 mm)				◆	◆
D300	1-1/2 to 3 inch (38 to 75 mm)	◆			◆	◆

# Performance specifications

## Flow specifications — standard sensors

		Mass		Volume	
<b>Nominal flow range<sup>(1)</sup></b>		<b>lb/min</b>	<b>kg/h</b>	<b>gal/min</b>	<b>l/h</b>
	D150 Tefzel	0 to 1400	0 to 38,100	0 to 168	0 to 38,100
	D300	0 to 7000	0 to 190,500	0 to 839	0 to 190,500
	D600	0 to 25,000	0 to 680,400	0 to 2998	0 to 680,400
<b>Maximum flow rate<sup>(2)</sup></b>		<b>lb/min</b>	<b>kg/h</b>	<b>gal/min</b>	<b>l/h</b>
	D150 Tefzel	2800	76,200	336	76,200
	D300	7000	190,500	839	190,500
	D600	25,000	680,400	2998	680,400
<b>Accuracy<sup>(3)</sup></b>	1700/2700 transmitter	liquid	±0.15% <sup>(4)</sup>		
		gas — except D300	±0.65% <sup>(5)</sup>		
	All other transmitters	liquid	±0.15% ± [(zero stability / flow rate) x 100]% of rate		
		gas — except D300	±0.65% ± [(zero stability / flow rate) x 100]% of rate		
<b>Repeatability<sup>(3)</sup></b>	1700/2700 transmitter	liquid	±0.05% <sup>(4)</sup>		
		gas — except D300	±0.30% <sup>(5)</sup>		
	All other transmitters	liquid	±0.05% ± [½(zero stability / flow rate) x 100]% of rate		
		gas — except D300	±0.30% ± [(zero stability / flow rate) x 100]% of rate		
<b>Zero stability</b>		<b>lb/min</b>	<b>kg/h</b>	<b>gal/min</b>	<b>l/h</b>
	D150 Tefzel	0.30	9.0	0.036	9.0
	D300	0.70	19.2	0.084	19.2
	D600	2.5	66.0	0.300	66.0

<sup>(1)</sup> Micro Motion has adopted the terminology "nominal flow range." The upper limit of this range is the flow rate at which water at reference conditions causes approximately 15 psid (1 bar) of pressure drop for D and DT sensors.

<sup>(2)</sup> When measuring gases, the velocity limit is 200 ft/s (61 m/sec).

<sup>(3)</sup> Flow accuracy includes the combined effects of repeatability, linearity, and hysteresis. All specifications for liquids are based on reference conditions of water at 68 to 77°F (20 to 25°C) and 15 to 30 psig (1 to 2 bar), unless otherwise noted.

<sup>(4)</sup> When flow rate is less than (zero stability / 0.0015), accuracy equals ± [(zero stability / flow rate) x 100]% of rate and repeatability is ± ½[(zero stability / flow rate) x 100]% of rate.

<sup>(5)</sup> When flow rate is less than (zero stability / 0.0065), accuracy equals ± [(zero stability / flow rate) x 100]% of rate and repeatability is ± ½[(zero stability / flow rate) x 100]% of rate.

DT100 <sup>(3)</sup>	900	62
DT150 <sup>(3)</sup>	600	41

**PED approved** Sensors comply to council directive 97/23/EC of 29 May 1997 on Pressure Equipment.

**Housing** All models Housing is not rated for pressure containment.

---

<sup>(1)</sup> Flow tube pressure rating at 77°F (25°C), according to ASME B31.3. For higher operating temperatures, tube pressure needs to be derated as follows:

Stainless steel sensors 7.2% derating from 301 to 400°F (149 to 204°C)  
Nickel alloy sensors 2% derating from 201 to 300°F (94 to 148°C)  
9.2% derating from 301 to 400°F (149 to 204°C)

<sup>(2)</sup> Flow tubes are 316L stainless steel with Tefzel lining.

<sup>(3)</sup> Pressure rating at 800°F (426°C).

<sup>(1)</sup> Pressure drop for gas was determined at 500 psi (34 bar) operating pressure and 75°F (24°C).

# Functional specifications

## Environmental influences

---

**Temperature effect on zero** Process temperature effect on zero is defined as the worst-case zero offset due to process fluid temperature change away from the zeroing temperature.

**Effect on zero <sup>(1)</sup>**  
**% of nominal flow rate per °C**

D150 Tefzel <sup>(2)</sup>	±0.002
D300	±0.004
D300 Tefzel <sup>(2)</sup>	±0.004
D600	±0.004
DH sensors	±0.01
DT sensors	±0.002

**Temperature offset** The long-term temperature offset causes a shift in sensor calibration, which is attributed to a long-term change in the elasticity modulus as a result of sensor operation at elevated temperatures. The calibration shift is always negative and causes the flowmeter to read lower than the actual flow rate. The effects of this shift can be minimized with periodic calibration. Only Model DT sensors are affected.

**Offset**

DT sensors	Above 600°F (315°C), -0.092% of rate per °C in addition to process temperature effect (above)
------------	---

**Pressure effect** Pressure effect is defined as the change in sensor flow sensitivity due to process pressure change away from the calibration pressure. Pressure effect can be corrected. Only the sensors listed below are affected.

	<b>Effect on flow accuracy</b>		<b>Effect on density accuracy</b>	
	<b>% of rate per psi</b>	<b>% of rate per bar</b>	<b>g/cc per psi</b>	<b>kg/m<sup>3</sup> per bar</b>
D300	-0.009	-0.131	-0.00001	-0.0175
D300 Tefzel <sup>(2)</sup>	-0.009	-0.131	-0.00001	-0.0175
D600	-0.005	-0.073	-0.0000031	-0.045

---

<sup>(1)</sup> Nominal flow rate is the upper limit of the nominal flow range.

<sup>(2)</sup> Flow tubes are 316L stainless steel with Tefzel lining.

# Functional specifications *continued*

## Power supply options

A power supply is required for the D600 booster amplifier.

Integral mount booster amplifier	85–250 VAC, 50/60 Hz
Remote mount booster amplifier	85–250 VAC, 50/60 Hz

## Hazardous area classifications

Intrinsically safe when properly connected to an approved transmitter.

UL is a U.S.A. approvals agency, CSA is a Canadian approvals agency, CENELEC is a European standards organization, and SAA is an Australian approvals agency.

### UL

<sup>(1)</sup> The CENELEC "T" rating is defined as the maximum surface temperature of the flowmeter. The "T" rating and the ambient temperature restrict the maximum allowable temperature of the process fluid (listed above). Ambient temperature limits for CENELEC-compliant sensors are listed on page 8.

<sup>(2)</sup> Flow tubes are 316L stainless steel with Tefzel lining.

# Physical specifications

## Materials of construction

Standard materials of construction are as follows:

SS = 316L stainless steel (SS) flow tubes and flanges, CF-3M SS manifolds

Ni = Hastelloy® C-22 nickel alloy (Ni) flow tubes and glands with Hastelloy CW-2M Ni manifolds

Ni/SS = Hastelloy C-22 Ni flow tubes with 316L SS manifolds and flanges

Lined = 316L stainless steel flow tubes with Tefzel® lining

25 mm JIS 20K weld neck raised face flange	133	28 (711)	4 59/64 (125)
<b>Fittings for DT150 sensors<sup>(1)</sup></b>			
1 1/2-inch ANSI 300 lb weld neck raised face flange	142	39 1/32 (992)	6 1/8 (156)
1 1/2-inch ANSI 600 lb weld neck raised face flange	143	39 43/64 (1008)	6 1/8 (156)
40 mm DIN PN40 weld neck, DIN 2635, type C face	144	37 13/64 (945)	5 29/32 (150)
40 mm JIS 20K weld neck raised face flange	146	37 13/64 (945)	5 33/64 (140)

<sup>(1)</sup> Fittings listed here are standard options. Other types of fittings are available. Contact your local Micro Motion representative.

# Ordering Information

## Model D, standard-pressure sensors (except D600) model number matrix

Code		Sensor model
DS150	D150	1 1/2-inch sensor, standard pressure
DS300	D300	3-inch sensor, standard pressure
Code		Wetted material
S		316L stainless steel — DS300 only
H		Hastelloy® C-22 nickel alloy — DS300 only
Z		316L stainless steel with Tefzel® lining
Code		Process connections
###		See fittings tables on pages 19-20
Code		Case options
S		Standard pressure containment
P		Purge fittings — (2) 1/2" NPT female
D		Metal rupture disk
R		Purge fittings and rupture disk — DS300 only
Code		Approvals
M		Micro Motion standard — no approvals
U		UL intrinsically safe — U.S.A. approvals agency
C		CSA — Canadian approvals agency
B		CENELEC — European approvals agency
S		SAA — Australian approvals agency
<b>Example</b>	<b>DS300 S 155 S U</b>

## Model D600

Code	Sensor model
DS600S	Micro Motion Coriolis D-Series sensor; 6-inch; standard pressure; 316L stainless steel
Code	Process connections
###	See fittings table on page 23.
Code	Case options
S	Standard case
Code	Electronics interface
K	Integral booster amp with local core processor to remote mount Series 1000/2000 transmitters
L <sup>(1)</sup>	Integral booster amp with core processor for direct host connection (MVDSolo, for OEM's)
M	Integral booster amp with 9-wire j-box
N	Remote booster amp with local core processor to remote mount Series 1000/2000 transmitters
O <sup>(1)</sup>	Remote booster amp with core processor for direct host connection (MVDSolo, for OEM's)
P	Remote booster amp w/ 9 wire j-Box
Code	Conduit connections
	<b><u>Electronics interface code 'K,' 'L,' 'N,' 'O' (local core processor)</u></b>
B	1/2-inch NPT – no gland
C	1/2-inch NPT with brass nickel cable gland (cable diameter 0.335 to 0.394 inches)
D	1/2-inch NPT with stainless steel cable gland (cable diameter 0.335 to 0.394 inches)
E	M20 – no gland
F	M20 with brass nickel cable gland (cable diameter 8.5 to 10.0mm)
G	M20 with stainless steel cable gland (cable diameter 8.5 to 10.0mm)
	<b><u>Electronics interface code 'M,' 'P' (9-wire j-box)</u></b>
A	3/4-inch NPT – no gland
H	3/4-inch NPT with brass nickel gland
J	3/4-inch NPT with stainless steel gland
Code	Approvals
M	Micro Motion Standard (no approval)
U	UL
C	CSA (Canada only)
A	CSA (US and Canada)
Z	CENELEC - Increased Safety
F	CENELEC- Flameproof
Code	Language
E	English Quick Reference Guide and English Manual

# Ordering Information *continued*

## Model D600 *(continued)*

Code	Connection to Booster Amp
A	3/4-inch NPT conduit opening
B <sup>(2)</sup>	M20 brass nickel adapter
C <sup>(2)</sup>	M20 stainless steel adapter
D <sup>(2)</sup>	1/2-inch NPT brass nickel adapter
E <sup>(2)</sup>	1/2-inch NPT stainless steel adapter
Code	Measurement Application Software
Z	none
A <sup>(3)</sup>	API
Code	Future Options
Z	Reserved for future use
Code	Factory Options
Z	Standard product
X	CEQ product
<b>Example</b>	<b>DS600 S M A U E A Z Z Z</b>

<sup>(1)</sup> Available with Micro Motion approval code M only.

<sup>(2)</sup> CENELEC and CSA approval only.

<sup>(3)</sup> Available with electronics interface codes L and O. For electronic interface codes K, M, N, and P select API software option on 2700 transmitter.

## Ordering Information *continued*

### Model DH, high-pressure sensors, model number matrix

Code	Sensor model
DH025	1/4-inch sensor, high pressure
DH038	3/8-inch sensor, high pressure
DH100	1-inch sensor, high pressure
DH150	1 1/2-inch sensor, high pressure
DH300	3-inch sensor, high pressure
Code	Wetted material
S	316L stainless steel
Code	Process connections
###	See fittings tables on pages 16-20
Code	Case options
S	Standard pressure containment
P	Purge fittings — (2) 1/2" NPT female, not available with DH100, DH150, or DH300
D	Metal rupture disk — not available with DH100, DH150, or DH300
Code	Approvals
M	Micro Motion standard — no approvals
U	UL intrinsically safe — U.S.A. approvals agency
C	CSA — Canadian approvals agency
B	CENELEC — European approvals agency
S	SAA — Australian approvals agency
<b>Example*</b>	DH038 S 119 S U

## Ordering Information *continued*

### Model DT, high-temperature sensors, model number matrix

Code	Sensor model
DT065	DT65 1/2-inch sensor, standard pressure, high temperature
DT100	DT100 1-inch sensor, standard pressure, high temperature
DT150	DT150 1 1/2-inch sensor, standard pressure, high temperature
Code	Wetted material
H	Hastelloy® C-22 nickel alloy
Code	Process connections
###	See fittings tables on page 25
Code	Case options
G	Standard high-temperature case
Code	Approvals
M	Micro Motion standard — no approvals
U	UL intrinsically safe — U.S.A. approvals agency
C	CSA — Canadian approvals agency
B	CENELEC — European approvals agency
Example	DT100 H 129 G U
