ELITE® Mass Flow and Density Meters

MVD™ technology

Micro Motion
FISHER-ROSEMOUNT™

Micro Motion® ELITE® Meters

Experience the most accurate Coriolis meters available today.

Micro Motion® ELITE® meters are the leading flowmeter for precision flow measurement. And with good reason. ELITE meters offer the most accurate measurement available for virtually any process fluid, while exhibiting exceptionally low pressure drop.

Seven sizes of ELITE meters offer direct mass flow, volume flow, density, and temperature measurement of liquids, gases, and slurries — without the need for additional equipment, manual calculations or estimations.

Micro Motion ELITE meters are designed for unsurpassed performance in even the most harsh operating environments. They have no moving parts, and no special mounting or flow conditioning requirements. Every ELITE meter features standard secondary containment, and is available with stainless steel or nickel alloy wetted parts and a wide variety of process connections to meet your every need. And, they require no maintenance — saving you money over the course of their lifetime by helping you make the most of your time, people, and materials.

ELITE meters carry hazardous area approvals for the U.S.A. and Canada, Europe, Australia, Japan and other areas in the Asia-Pacific region.

Special Applications

Several ELITE meters have been designed for special applications. The CMF010 is our smallest meter, designed for remarkably high performance in low-flow applications. It features a single, continuous flow tube, and is also available in a high-pressure model, for applications up to 6000 psi (413 bar).

Much larger in size is our CMF400. This 4-inch meter offers the most accurate measurement available in a high-capacity meter.

The 3-inch CMF300A is a high-temperature meter. It provides the same accuracy and measurement capabilities as our other ELITE meters, at temperatures up to 650°F (343°C).

Our CMF025, CMF050, and CMF100 meters are available with optional, flangeless, wafer-style process connections.

MVD™ Technology

Micro Motion ELITE meters are now available with MVD™ Technology — a new, innovative, multivariable, digital signal processing capability. A core processor, integrally mounted on the ELITE sensor, works with our new Series 1000 and 2000 transmitters to improve ease of use, reduce downtime, and lower your flow metering costs. Meters with MVD Technology provide cleaner, noise-free digital signals. Digital signal processing means faster response times, enhanced diagnostic capabilities, higher accuracy, and better repeatability.

System Integration

Micro Motion offers a variety of microprocessor-based transmitters, any of which can be connected to our ELITE sensors. Depending on the transmitter model, features include milliampere and frequency/pulse outputs, transmitter and process control functions in a single device, and API outputs for crude oil and other hydrocarbon fluids.

Other options include transmitters that can be installed in instrument racks or panels, or housed in NEMA or explosion-proof enclosures. Sensors and explosion-proof transmitters can be installed in the same hazardous area.

Micro Motion ELITE meters can be installed as part of a Bell 202 multidrop network, an RS-485 digital communications network, or a Profibus-PA or FOUNDATION™ fieldbus system.

Transmitters feature HART®, Modbus®, FOUNDATION™ fieldbus, Profibus-PA, and other communication protocols. And all our transmitters support Fisher-Rosemount™ PlantWeb® field-based architecture, which uses the power of intelligent, interoperable field devices to improve plant performance.

Micro Motion is known worldwide for increasing plant efficiency, production, and profitability. More than 300,000 Micro Motion meters are installed and working in processes just like yours. Contact us, and discover the best precision flowmeters available today — Micro Motion ELITE meters.

	CMF300	0.25	6.80		
	CMF400	1.50	40.91		

⁽¹⁾ Micro Motion has adopted the terminology "nominal flow range." The upper limit of this range is the flow rate at which water at reference conditions causes approximately 15 psid (1 bar) of pressure drop for ELITE sensors.

⁽²⁾ Accuracy includes the combined effects of repeatability, linearity, and hysteresis. All specifications for liquids are based on reference conditions of water at 68 to 77°F (20 to 25°C) and 15 to 30 psig (1 to 2 bar), unless otherwise noted.

⁽³⁾ When flow rate is less than (zero stability/0.001), accuracy equals ±[(zero stability/flow rate) x 100]% of rate and repeatability equals ±[½(zero stability/flow rate x 100)% of rate.

Performance specifications *continued*

Gas Flow		Standard Volume⁽¹⁾

	CMF025	0.0131	0.021
	CMF050	0.0784	0.126
	CMF100	0.3265	0.526
	CMF200	1.045	1.69
	CMF300	3.265	5.26

⁽¹⁾ Air density at standard conditions, 14.73 psia, 60 °F, equals 0.077 lb/ft³ for scfm. For Nm³/h, normal conditions are 1.013 bara, 0 °C equals 1.293 kg/m³.

⁽²⁾ Micro Motion has adopted the terminology "nominal flow range." The upper limit of this range is the flow rate at which air at 60 °F (15.5 °C) and 1000 psig (70 bar) causes approximately 15 psid (1 bar) of pressure drop for ELITE sensors.

⁽³⁾ Accuracy includes the combined effects of repeatability, linearity, and hysteresis. All specifications for gas are based on air at 60 °F (15.5 °C) and 1000 psig (70 bar), unless otherwise noted.

⁽⁴⁾ When flow rate is less than (zero stability/0.0035), accuracy equals ±[(zero stability/flow rate) x 100]% of rate, and repeatability is equal to ±[½(zero stability/flow rate) x 100]% of rate.

Remote booster amplifier for CMF400		–40 to 140	–40 to 60	ambient		

⁽¹⁾ Accuracy includes the combined effects of repeatability, linearity, and hysteresis. All specifications for liquids are based on reference conditions of water at 68 to 77 °F (20 to 25 °C) and 15 to 30 psig (1 to 2 bar), unless otherwise noted.

⁽²⁾ For CENELEC-compliant sensors, the CENELEC "T" rating and hazardous area classification depend on the maximum process fluid and ambient temperature. See page 11.

⁽³⁾ For CENELEC-compliant sensors, the maximum ambient temperature is 55 °C. Use of sensors with a junction box above 55 °C is acceptable, provided the ambient temperature does not exceed the CENELEC "T" rating listed on page 11 for temperature of the fluid.

⁽⁴⁾ For CENELEC-compliant sensors, the minimum process fluid and ambient temperature is –20 °C. If the process fluid remains at or above 0 °C, ambient temperature below –20 °C is acceptable for sensors with a junction box, and ambient temperature of –40 °C is allowed for sensors with a core processor.

⁽⁵⁾ For CENELEC-compliant sensors, the maximum ambient temperature is 60 °C and the minimum ambient temperature is –40 °C.
